

Utsav Chandra Kayastha

utsavkayastha.000@gmail.com | 9869562922 | [LinkedIn](#)

Junior Software Engineer with a growing foundation in backend development for financial systems.

Professional Summary

- Hands-on experience in developing, maintaining, and enhancing backend and full-stack applications by implementing new features, resolving defects, and improving existing functionalities.
- Proficient in developing RESTful APIs using Spring Boot.
- Experience working with PostgreSQL for database design, writing SQL queries, and data management.
- Working knowledge of access-control and authorization concepts, including role- and permission-based data access.
- Enthusiastic learner with the ability to quickly adapt to new technologies, frameworks, and development tools in a professional environment.

Experience**Nepal Clearing House Ltd.**

Jr. Software Engineer

Jan 2026 – Present

- Contribute to the design and development of access-control features, including a role-permission grouping model with an approval workflow.
- Build data-scoping logic to filter admin data access by branch and enrollment scope.
- Identify and resolve security issues found during VAPT assessments, including session and login-related vulnerabilities.
- Assist in migrating card EFT transaction logic to a middleware service, helping coordinate data changes across systems.
- Implement audit logging for admin activity and build customer profile onboarding features supporting bulk uploads.
- Refactor database schema components to improve data consistency across multiple tables.
- Collaborate with cross-functional teams throughout the software development lifecycle, including code reviews and testing.

Tech Stacks: Java, Spring Boot, Spring Security, PostgreSQL, JWT, Git

Nepal Clearing House Ltd. (NCHL)

Software Engineering Fellow

Oct 2025 – Dec 2025

- Completed hands-on training in Angular, Spring Boot, Java, PostgreSQL, and Git, gaining a strong foundation in full-stack software development.
- Learned and applied software engineering concepts, including RESTful API development, database design, version control, and frontend-backend integration.
- Applied Spring Security and Domain-Driven Design (DDD) fundamentals while working within a legacy transactional codebase.

- Used Docker for database containerization and SonarQube for code quality, collaborating in a team-based Agile environment.

Tech Stacks: Java, Spring Boot, Angular, Docker, SonarQube, Git

Logispark Technologies

Frontend Intern

Jul 2025 – Oct 2025

- Learned and applied frontend development concepts using Vue.js, Nuxt.js, and JavaScript.
- Improved UX by replacing pagination with infinite scroll and optimizing Lighthouse performance metrics.
- Built applications with JWT authentication, route guards, and interceptors.
- Managed application state using Pinia and Vuex, and implemented Progressive Web App (PWA) features.

Tech Stacks: Vue.js, Nuxt.js, Javascript, JWT, Pinia, Vuex

Education

- Bachelor's in Computer Engineering (2021–2025), Khwopa College of Engineering
- Higher Secondary Certification (2018–2020), Khwopa Higher Secondary School
